

SUBJECT: Upgrade on 3.5 ton capacity Inground Lifts

We are pleased to inform you that, starting from January 2025, the updated versions of 3.5 ton capacity inground lifts **TECO IL 635.2 EVO** and **TECO IL 3502 EVO** are available in the price list, replacing the previous models **TECO IL 635.2** and **TECO IL 3502**.

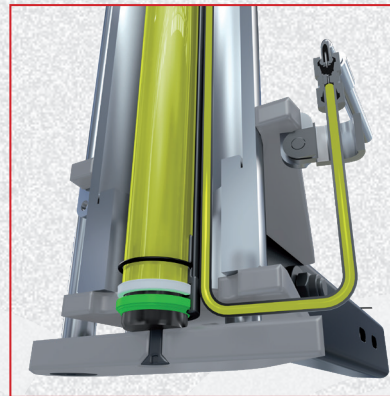

Below is the list of the main improvements introduced in the new version:

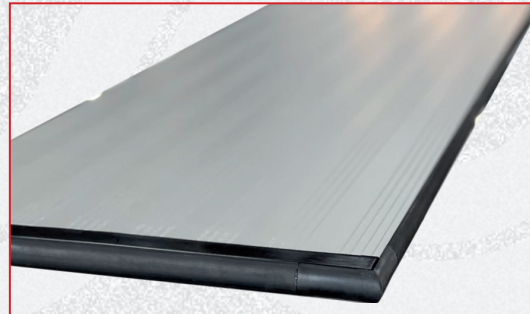

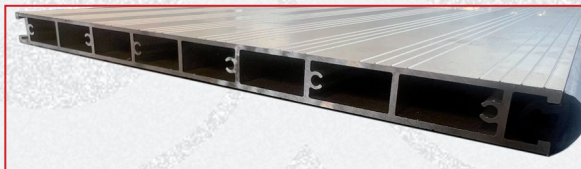

- **Higher installation and operation flexibility**, thanks to the smart clamping system: the guide, clamped into the frame, has an adjustable headplate; the clamping frame is bolted to the sub-casing, assembled at the factory, but can also be used without it, for ceiling installation.

- **Improved surface quality:** the hot dip galvanized frame and the anodized aluminium guide and cassette cover ensure optimal protection against corrosion while minimizing maintenance operations.
- **Maximum stability,** thanks to the use of new strong 140 mm cylinders: with the self-bleeding drive cylinder, the oil volume is only 10 litres per lift.

- **Greater performance and resistance,** thanks to the new cassette cover, made of anodized aluminium profile and protected by rubber seals: it is resistant to moisture and is able to safely absorb even the great forces that are generated, for example, during battery removal.

- **Optimised synchronisation and safety,** by a synchronization bar which can be adjusted to varying piston distances: the new standard is 1550 mm or 2600 mm.
